EXPERIMENT 3: E-Commerce Mobile Application UI Prototype Using Figma

Aim

To design and develop a prototype of an E-Commerce mobile application using Figma to resolve conflicting stakeholder views, collect feedback, and obtain approval for the user interface design.

Tool Used

Figma – A UI/UX design and prototyping tool.

Theory

A prototype is a preliminary model of an application that shows how the final application will look and work.

Figma is used to create UI screens, buttons, images, navigation, and interactive links between screens.

For this E-Commerce application, the prototype contains:

- Home Page
- Product Details Page
- Shopping Cart Page
- Checkout Page
- Order Confirmation Page
- Stakeholder Feedback

The prototype can be shown to stakeholders to identify design issues, collect their suggestions, modify the design, and get final approval before actual development.

Procedure

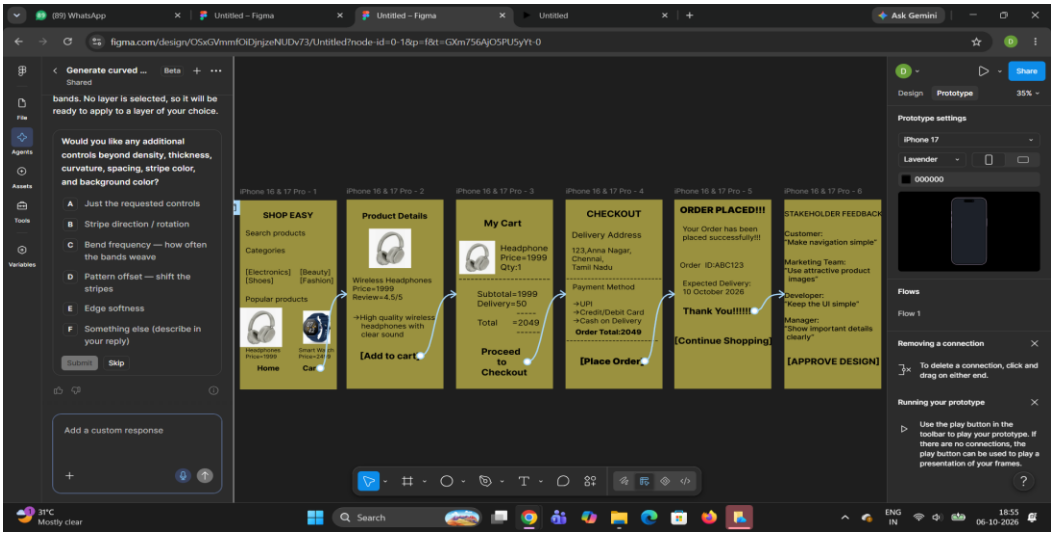

1. Open Figma and create a new design file.
2. Select the Frame tool and create a mobile-sized frame.
3. Create the Home Page with search bar, categories, and products.
4. Create the Product Details Page with product image, name, price, description, and Add to Cart button.

5. Create the Shopping Cart Page with selected products, quantity, and total price.
6. Create the Checkout Page with delivery address, payment method, and Place Order button.
7. Create the Order Confirmation Page showing successful order placement.
8. Use the Prototype option to connect the pages using buttons and navigation arrows.
9. Run the prototype using the Present/Play option.
10. Show the prototype to stakeholders and collect their feedback.
11. Identify conflicting opinions and modify the UI based on the feedback.
12. Present the modified prototype to stakeholders for final approval.

Algorithm

START
↓
Open Figma
↓
Create Mobile Frame
↓
Design Home Page
↓
Design Product Details Page
↓
Design Cart Page
↓
Design Checkout Page
↓
Design Order Confirmation Page
↓
Connect Pages using Prototype
↓
Test the Prototype
↓
Collect Stakeholder Feedback
↓
Modify UI Based on Feedback
↓
Get Stakeholder Approval
↓
STOP

Output:

Result

The **E-Commerce mobile application prototype was successfully created using Figma**. The prototype allows stakeholders to navigate through the shopping process, provide feedback on the UI design, and approve the final design.
