Experiment 04: Scrum Project in Jira with Blocker Alert

Aim

To create a Scrum project in Jira, manage tasks with a sprint deadline, and configure automatic email notifications when a blocker task is created.

Tools Used

- Jira Software
- Scrum board and Backlog
- Jira Automation
- Email account (for receiving alerts)

Procedure:

Step 1: Create a Scrum Project

1. Open Jira and log in.
2. Click Projects and select Create project.
3. Choose the Scrum template.
4. Enter the project name as Online Shopping App.
5. Click Create project.

Step 2: Create Five Tasks

1. Open your project and go to Backlog.
2. Click Create work item or Create issue.
3. Create these five tasks:
    - Design login page
    - Develop login API
    - Create product page
    - Integrate payment gateway
    - Test the application
4. Save each task.

Step 3: Create a Sprint

1. Open Backlog.
2. Click Create sprint.
3. Move the five tasks into the sprint.
4. Set the sprint dates:
    - Start date: 11/10/2026
    - End date: 19/10/2026
5. Start the sprint if required for your experiment.

Step 4: Create a Blocker Task

1. Go to Backlog and click Create work item.
2. Enter the summary as BLOCKER - Payment API unavailable.
3. Describe the problem in the description field.
4. Save the work item.

Step 5: Open Jira Automation

1. Open your Online Shopping App project.
2. Open the project's automation settings.
3. Select Flows or Create automation.
4. Create a new automation flow named Scrum Blocker Alert.

Step 6: Configure the Trigger

1. Click Add trigger.
2. Select Work item created.
3. Save the trigger.

This makes the automation run whenever a new work item is created.

Step 7: Add a Condition

1. Click Add condition.
2. Select the condition for checking a work item's field.
3. Choose Summary as the field.
4. Select Contains as the operator.
5. Enter BLOCKER as the value.
6. Save the condition.

This ensures that the email action runs only when the new work item's summary contains BLOCKER.

Step 8: Configure the Email Alert

1. Click Add action.
2. Select Send customized email.
3. Enter your email address in the recipient field.
4. Set the subject to SCRUM BLOCKER ALERT - New Blocker Detected.
5. Enter a message explaining that a new blocker has been reported.
6. Save the action.

Step 9: Enable the Automation

1. Save the flow.
2. Enable the Scrum Blocker Alert rule.
3. Confirm that the rule is switched on.

Step 10: Test the Automation

1. Create a new work item with the summary BLOCKER - Test alert notification.
2. Save the work item.
3. Open your email inbox and check for the notification.
4. Confirm that the email arrives successfully.

Step 11: Verify the Result

Confirm that Jira sends an email when a newly created work item's summary contains BLOCKER.

Result: The Scrum project was created, and the blocker alert automation was configured and tested successfully.

Algorithm

1. Start.
2. Create a Scrum project and five tasks.
3. Configure the sprint deadline.
4. Create a blocker task when an obstacle occurs.
5. Check whether the task summary contains BLOCKER.
6. If the condition is true, send an email notification.

7. Otherwise, do not send an email through this rule.
8. Stop.

Result

The Scrum project was created successfully, and the blocker alert automation was configured and tested. An email notification was received when a matching blocker task was created.

Ouput
