EXPERIMENT 2: Bus Ticket Booking System Prototype using Figma

Aim

To design and create a simple Bus Ticket Booking System prototype using the Figma tool with interactive navigation between different screens.

Tool Used

- **Figma** – UI/UX design and prototyping tool
- **Web Browser** – To access Figma

Theory

Figma is a cloud-based UI/UX design and prototyping tool used to create user interfaces and interactive prototypes.

A prototype represents how a real application works. In a bus ticket booking system, the user can search for buses, select a bus, choose a seat, enter passenger details, and confirm the booking.

The prototype uses frames to represent different screens and connections/interactions to navigate from one screen to another.

Procedure

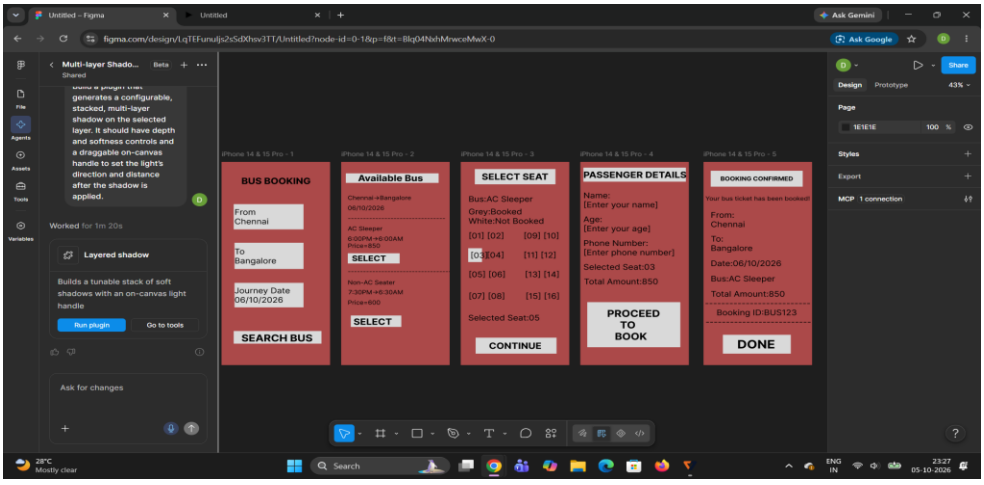

1. Open **Figma** and create a new design file.
2. Create a mobile **Frame** for the Home screen.
3. Design the Home screen with:
    a. From location
    b. To location
    c. Journey date
    d. Search Bus button
4. Create a second frame for the **Available Bus** screen.
5. Add bus details such as:
    a. Bus type
    b. Departure and arrival time
    c. Ticket price
    d. Select button
6. Create a third frame for **Seat Selection**.

7. Add available seats and a **Continue** button.
8. Create a fourth frame for **Passenger Details**.
9. Add fields for name, age, phone number and booking button.
10. Create a fifth frame for **Booking Confirmation**.
11. Use the **Prototype** option in Figma to connect the buttons between the frames.
12. Connect the screens in the following order:
13. Click the **Present/Play** button to test the prototype.
14. Verify that each button navigates to the correct screen.

Algorithm

1. **Start**
2. Display the Bus Booking Home screen.
3. Enter source, destination and journey date.
4. Click **Search Bus**.
5. Display the available buses.
6. Select a bus.
7. Display the available seats.
8. Select a seat.
9. Enter passenger details.
10. Click **Proceed to Book**.
11. Display the booking confirmation with booking details.
12. Click **Done**.
13. **Stop**

Output

Result

A simple and interactive **Bus Ticket Booking System prototype** was successfully designed and implemented using **Figma**. The screens were connected and tested successfully from bus search to booking confirmation.
