Experiment 08- Requirement Prioritization Using MoSCoW and Kano Models in Jira for an Online Learning Platform.

1. Aim

To categorize and prioritize the requirements of an Online Learning Platform using the **MoSCoW and Kano models in Jira**.

2. Tools Used

- **Jira:** For creating tasks and managing requirements.
- **MoSCoW Model:** For prioritizing requirements.
- **Kano Model:** For classifying features based on user satisfaction.

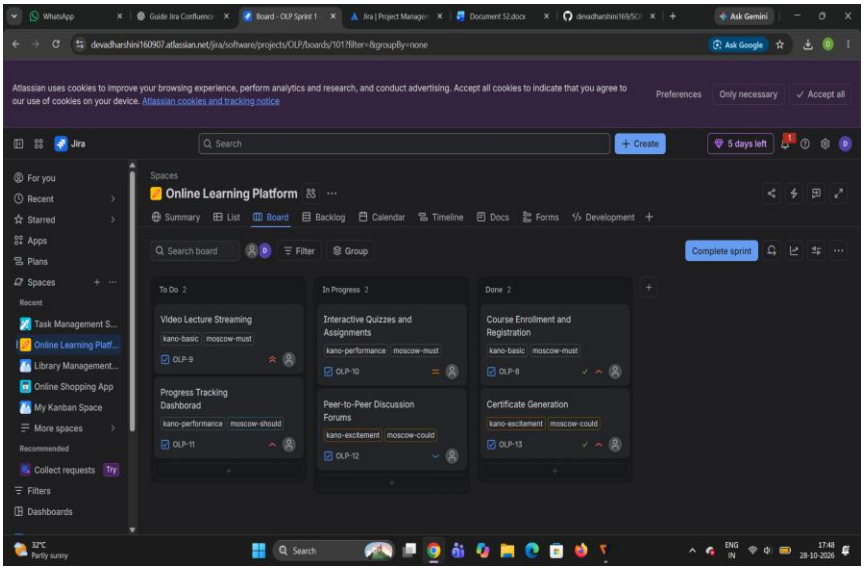

3. Procedure

1. Open Jira and create a project named **Online Learning Platform**.
2. Create six tasks representing the platform's requirements.
3. Apply MoSCoW labels to classify requirements as Must Have, Should Have, or Could Have.
4. Apply Kano labels to classify features as Basic, Performance, or Attractive.
5. Open each task and verify that both labels are assigned correctly.
6. Open the Jira board to view all six tasks, their labels, and their statuses.
7. Capture a screenshot of the completed Jira board.

4. Algorithm

1. Start.
2. Create the Online Learning Platform project in Jira.
3. Create six requirement tasks.
4. Assign MoSCoW categories to each task.
5. Assign Kano categories to each task.
6. Verify the assigned labels.
7. Display the tasks on the Jira board.
8. Capture the output.
9. Stop.

5. Output

6. Result

The six requirements of the Online Learning Platform were successfully created, categorized, and prioritized in Jira using the MoSCoW and Kano models.
