

EXPERIMENT 1

Create a Kanban Board to Visualize the Tasks

Aim

To create a Kanban Board in Jira to visualize project tasks and move the tasks through different stages of the workflow.

Tool Used

- Jira

Theory

A Kanban Board is a visual project management tool used to represent and track the progress of tasks.

In Jira, tasks can be organized into different workflow stages. In this experiment, the tasks are managed using the following columns:

- **To Do** – Tasks that are yet to be started.
- **In Progress** – Tasks that are currently being worked on.
- **In Review** – Tasks that are completed and waiting for review.
- **Done** – Tasks that have been completed successfully.

Procedure

Step 1: Open Jira

1. Open the Jira website.
2. Log in using an Atlassian account.
3. Open the My Kanban Space.

Step 2: Open the Board

1. Select My Kanban Space.
2. Click the Board option.
3. The Kanban Board is displayed.

Step 3: Create the Workflow Columns

The Jira board contains the following columns:

1. To Do
2. In Progress
3. In Review
4. Done

The workflow is:

To Do → In Progress → In Review → Done

Step 4: Create Sample Tasks

Five tasks were created in the Jira Kanban Board:

S.No	Task	Status
1	Planning	Done
2	Execution	To Do
3	Testing	In Progress
4	Deployment	In Review
5	Maintenance	To Do

Step 5: Move the Tasks

The tasks are moved between the columns according to their progress.

For example:

Planning

To Do → In Progress → In Review → Done

Similarly, other tasks can be moved through the workflow as the work progresses.

Step 6: Observe the Kanban Board

The final Jira board contains:

To Do	In Progress	In Review	Done
Execution	Testing	Deployment	Planning
Maintenance			

Algorithm

1. Start.
2. Open Jira and log in.
3. Open My Kanban Space.
4. Select the Board view.
5. Create the required workflow columns.
6. Create five sample tasks.
7. Add the tasks to the appropriate columns.
8. Move tasks between columns according to their progress.
9. Observe the task workflow.
10. Stop.

Result

Thus, a Kanban Board was successfully created using Jira. Five sample tasks were added and organized into To Do, In Progress, In Review, and Done columns to visualize the task workflow.
