1. Aim

To prioritize the requirements of a Task Management System using the **MoSCoW and Kano models in Jira**.

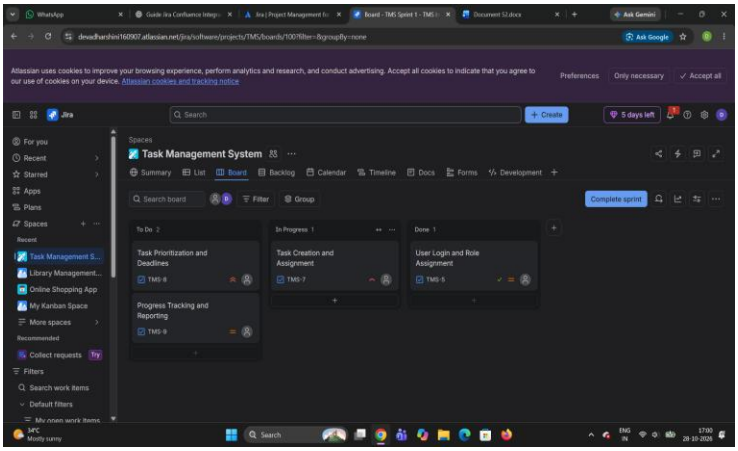

2. Procedure

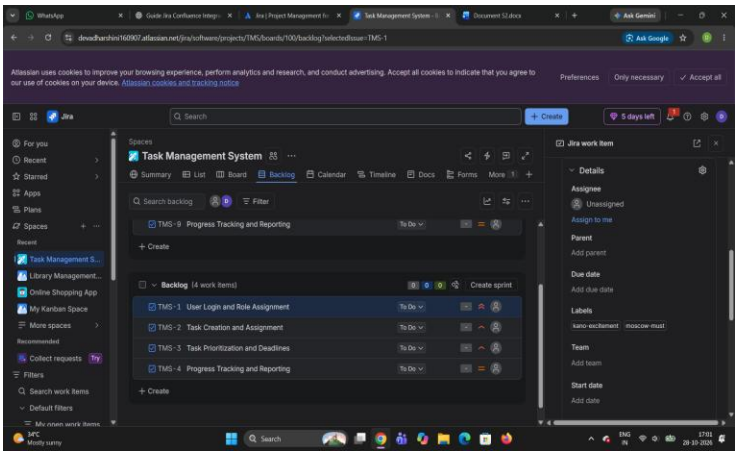

1. Open Jira and create a project named **Task Management System**.
2. Create four tasks: User Login and Role Assignment, Task Creation and Assignment, Task Prioritization and Deadlines, and Progress Tracking and Reporting.
3. Assign MoSCoW labels to classify requirements as Must Have or Should Have.
4. Assign Kano labels to classify requirements as Basic or Performance.
5. Verify the labels in each task's details.
6. Open the Jira board to view the tasks and their statuses.

3. Algorithm

1. Start.
2. Open Jira and create a project.
3. Create the four requirements as tasks.
4. Apply MoSCoW labels based on requirement priority.
5. Apply Kano labels based on expected user satisfaction.
6. Verify the labels and task details.
7. View the tasks on the Jira board.
8. Stop.

4. Output

5. Result

The requirements of the Task Management System were successfully created and prioritized in Jira using the MoSCoW and Kano models.
